PROFILE

Product-minded engineer with a background in business data analysis and applied AI. Since September 2025, combining independent website and AI consulting projects with one-to-one tutoring in mathematics and English. Since May 2026, shaping and operating Magical Chart, a live bilingual AI-powered product — including its own multi-step AI agent and a published MCP server. Experienced in product direction, user journeys, prioritization, analytics and iteration. Seeking Product Owner, Digital Product Manager or AI Product roles.

EXPERIENCE

Founder & Product Lead — Magical Chart

May 2026–Present | Independent digital product | Remote | magicalchart.com

- Conceived and launched a bilingual AI-powered product with interactive tarot, astrology and numerology experiences; own its product direction, roadmap, user journeys and iteration.
- Shape pricing and the free-to-paid journey; use product analytics and customer feedback to prioritize improvements.
- Built an interactive, location-aware 3D Star Map (https://www.magicalchart.com/star-map), connecting the product's astronomy engine to a 3D sky with named stars and touch-friendly controls.
- Added a 3D landscape mode to the same Star Map (https://www.magicalchart.com/star-map) rendering the real horizon and terrain, so the sky feels grounded in a specific place instead of abstract.
- Scoped and shipped a multi-step AI agent (Anthropic tool-calling), deliberately contained: isolated page, daily usage quota, hard monthly spend cap read from usage logs before every call — validating demand before committing budget, not just a technical build.
- Built and published an open-source MCP (Model Context Protocol) server exposing the product's astronomical engine as callable tools for any AI agent, verified with a real client handshake before release.
- Build and deploy with Claude Code, Codex and Cursor, leading product decisions and AI-assisted workflows.
- Audited AI inference spend with a custom usage-tracking script, found one model choice responsible for **81% of cost** on lower token volume, and migrated every production AI call to a more cost-efficient model without degrading output quality.
- Operate an English/French product with **1,100+ informational pages** and interactive tools.
- Latest 30-day analytics: **3,828 users and 5,011 sessions** in GA4 (12 Sep–11 Oct 2026); Search Console recorded **1,604 clicks** (12 Sep–10 Oct 2026).

Freelance Web & AI Consultant — Independent

September 2025–Present | Remote | florynepierson.com

- Create websites for clients and advise on practical ways to use AI in their work.
- Built a Make.com automation for a small-business client to handle incoming email, removing a manual step from their operations — hands-on workflow automation, not just API theory.
- Deliver content strategy, SEO and analytics work end to end, from technical audit to implementation and measurement (Google Search Console, GA4, Microsoft Clarity).
- Client project: local SEO and booking-journey optimisation for Claire et Coloré, a beauty salon in Reims — diagnosed drop-off points in the booking path and shipped the fix.
- Prospect for projects, clarify needs and scope solutions with prospective clients.

Private Tutor — Mathematics & English

September 2025–Present | Middle school and high school level | France

- Provide one-to-one tutoring in mathematics and English for secondary-school students.
- Adapt explanations and practice to each student's level and learning goals.

Business Data Analyst — LOBELLIA Conseil / ASTILLIA

September 2024–July 2025 | Permanent | Client assignment: URSSAF | Montrouge, France

- Analyzed and processed business data to support operational decision-making and reporting.
- Worked with business and technical stakeholders to clarify requirements and support delivery.
- Produced reporting and data-driven analyses; contributed to monitoring, process improvements and tool improvements.
- **Tools:** SQL, PostgreSQL, Power BI, Git, pgAdmin.

Business Data Analyst Intern — LOBELLIA Conseil / ASTILLIA

February 2024–August 2024 | Internship | Montrouge, France

- Developed and maintained Power BI dashboards for business users.
- Automated recurring reporting and operational tasks using VBA.
- Supported requirements analysis, data processing and project deliverables in collaboration with business teams.
- **Tools:** Power BI, VBA.

AI & Data Science Intern — Viaticum

May 2023–August 2023 | Paris, France

- Independently designed and developed an AI-based approach to personalize travel offers using consumer profiles and preferences.
- Defined consumer personas and matching logic to connect profiles with relevant travel offers.
- Led the project from problem definition and data analysis through solution development, results analysis and stakeholder presentation.
- **Tools:** Python, Deep Learning, NLP, Power BI.

Engineering Studies Intern — SNCF Réseau

June 2022–July 2022 | Metz, France

- Supported engineering teams with operational reporting, organization and analysis of information.
- Contributed to internal process improvements and basic automation.

EDUCATION

ESILV — École Supérieure d'Ingénieurs Léonard de Vinci
De Vinci Higher Education, Paris–La Défense
General Engineering Degree, Data & Artificial Intelligence major | 2021–2024
Coursework: C#, Python, supervised & unsupervised learning, deep learning fundamentals.

Hanyang University (Seoul, South Korea) — Department of Computer Science
Master 2 exchange semester | August–December 2023
Relevant coursework: Computer Vision, Data Science for Social Sciences, Natural Language Processing, Machine Learning, Korean Language (Foundational)

Lycée Fabert — CPGE MPSI/MP* (Classes Préparatoires aux Grandes Écoles)
Metz, France | 2018–2021
Two-year intensive preparatory program in advanced mathematics, physics and engineering sciences, admission by national competitive examination into France's top engineering and business schools — widely regarded as one of the most selective and academically demanding tracks in French higher education.

Lycée Georges de la Tour — Baccalauréat (French national secondary-school diploma)
Metz, France | 2018
Scientific track (S), Mathematics specialization — Highest Honors.

SKILLS

Product: Product discovery, product direction, feature prioritization, user journeys, prototyping, product analytics, experimentation, cross-functional collaboration, product delivery

Data & AI: SQL, PostgreSQL, Python, Deep Learning, NLP, AI product integration, LLM-assisted prototyping, multi-step tool-calling agents (Anthropic), the Model Context Protocol (built a server), retrieval-augmented generation (RAG)

Engineering & Tools: Node.js, APIs & webhooks, Supabase, Vercel, Stripe, Claude Code, Codex, Cursor, Make.com, Power BI, GA4, Google Search Console, Git, VBA, pgAdmin

LANGUAGES

French: Native · **English:** Fluent · **Spanish:** Intermediate
